

Software Engineer

GoogleIn-office: Munich Germany

Apply

A person with disabilities will be given preferential consideration per local regulations.

Minimum qualifications:

- Bachelor's degree in Computer Science or equivalent practical experience.
- Experience coding in C, C++, Java, or Python.
- Ability to speak and write in English fluently.

Preferred qualifications:

- Experience with one or more general purpose programming languages, including but not limited to: C#, Objective-C, JavaScript, or Go.
- Strong competencies in data structures, algorithms, and software design optimized for large-scale distributed software systems.

About the job

Google's software engineers develop the next-generation technologies that change how billions of users connect, explore, and interact with information and one another. Our products need to handle information at massive scale, and extend well beyond web search. We're looking for engineers who bring fresh ideas from all areas, including information retrieval, distributed computing, large-scale system design, networking and data storage, security, artificial intelligence, natural language processing, UI design and mobile; the list goes on and is growing every day. As a software engineer, you will work on a specific project critical to Google's needs with opportunities to switch teams and projects as you and our fast-paced business grow and evolve. We need our engineers to be versatile, display leadership qualities and be enthusiastic to take on new problems across the full-stack as we continue to push technology forward.

Google aspires to be an organization that reflects the globally diverse audience that our products and technology serve. We believe that, in addition to hiring the best talent, a diversity of perspectives, ideas, and cultures leads to the creation of better products and services.

We hire people who are smart and passionate, and we favor ability and willingness to learn over experience. Although Googlers share common goals and visions for the company, we hail from all walks of life and speak dozens of languages, reflecting the global audience that we serve.

Responsibilities

- Utilize your expertise to engage in and enhance the whole lifecycle of services - to design, develop, test, deploy, maintain, and improve software.
- Research, conceive, and develop web applications to extend and improve on Google's product offering. Launch, iterate, and make a difference. Help to make Google products better for our users.
- Collaborate on scalability issues involving massive amounts of data and information.
